IPAS har vært medlem av Renas siden 2007 og alle produktene skal leveres tilbake til returpunkter for resirkulering. 98% av LED armaturer kan resirkuleres.

Energisparing: Generelt representerer bytte fra halogen til LED > 90% energisparing

Ved dimming er energibesparelse høyere. Ved sensor/lysstyring får du maks besparelse.

## Rengjøring:

Planmessig rengjøring gir deg best belysning over tid.

**Gjør anlegg alltid strømløst før rengjøring.**

Det anbefales støvtørking med mikrofiber. Intervaller avhenger av bruksområdets støv-/smusmengde. Unngå sterke kjemikalier (pH>7) og vær varsom med frontlinse eller reflektor hvis denne er tilgjengelig. Ikke spray midler direkte på armatur.

Særlig tilsmussede områder kan rengjøres med mildt såpevann, men prøv på et avgrenset område først.

LED Driver eller åpne komponenter må ikke utsettes for vann eller fuktighet.

### Summary

This product is an energy automatic sensor switch, it can identify day and night. It adopts infrared detector, IC and SMD technology, when someone enter its detecting range and triggered it work, the infrared detector turn on the lamp, after he leave its range, the lamp will turn off automatically. It can detect the ambient light illumination automatically and set and adjust the value according to the fact need. Such as, the light will turn on and works when the ambient light illumination is under setting value. once it exceeds the setting value, the light will stop working. It can be installed in indoor, corridor and public-building.

### Function

1. Adopts 8-bit DIP switch:
  - You can select working light to work only in the light below 10lux or in any light;
  - Adjustable sensitivity;
  - Choose working time-delay of the load: 5s, 30s, 1Min, 3Min, 5Min, 8Min.
2. The time that the load work can delay automatically: it re-computes time after the last sensing;
3. Out connect infrared detector and sensitization resistor;
4. Simple structure and using convenient.
