

WIN-WIN with Push-in: **PKZ & DIL**

Product overview Push-in technology

Powering Business Worldwide

PKZ & DIL, the win-win effect: faster and more cost-effective at the same time

Eaton's Moeller series xStart range is being upgraded with Push-in technology. This new tool-free connection technology makes wiring even faster, safer and more efficient. The PKZ and DIL solution with Push-in technology offers maximum reliability, can be used anywhere in the world and integrates seamlessly into existing control panel designs.

Trusted technology just got even better.

Eaton has more than 100 years of experience and extensive know-how in the field of motor protection and contactors. Since we launched the xStart range in 2004, we have sold more than 100 million units. No one else has more experience and expertise in this field.

Like the rest of the xStart modular system, the products with Push-in technology are developed in Germany and approved for global use.

Who needs screws? The trick with the click.

The Push-in terminals enable safe and easy control-panel wiring with just one click. With our modular system and wide range of accessories, you'll always find the right solution for your application.

Thanks to their compact, space-saving size, the devices can be easily integrated into existing control cabinet designs.

Combining new technology and proven wiring concepts.

Our Push-in range even includes devices that combine screw and Push-in terminals for use with a 3-phase busbar link.

To sum up, the Push-in technology makes your work noticeably easier! Integrating the devices into existing systems is easy and cost-effective - anywhere in the world.

DILM17 contactors

Motor-protective circuit breaker

Future-proof your control panel the simple way - with Eaton's Push-in range.

Technicians and purchasers alike love the new xStart range. Wiring has never been more efficient, thanks to Eaton's tried and tested PKZ and DIL range and our cutting-edge push-in technology, which eliminates the need for tools. You too can benefit from this win-win effect by future-proofing your control panel the simple way.

Future-proof your control panel the simple way - with xStart.

Eaton has been developing motor starters for over 100 years and our products are used around the world. From the beginning, our ideas and innovations have made a major contribution to advances in motor protection and switching. Given our long tradition in the field, we've turned motor protection into one of our core areas of expertise, which we continue to develop to this day.

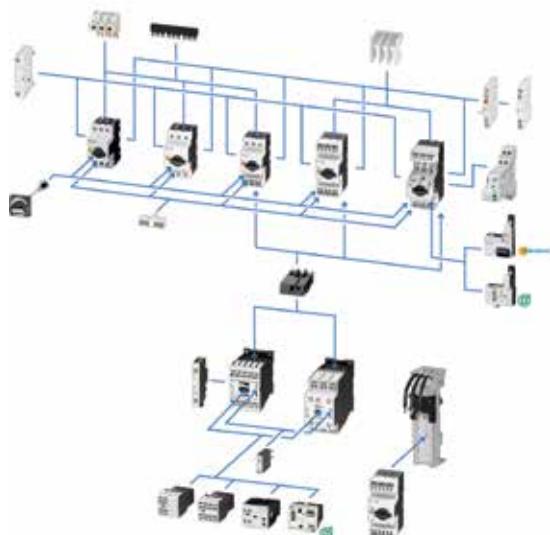

xStart system overview

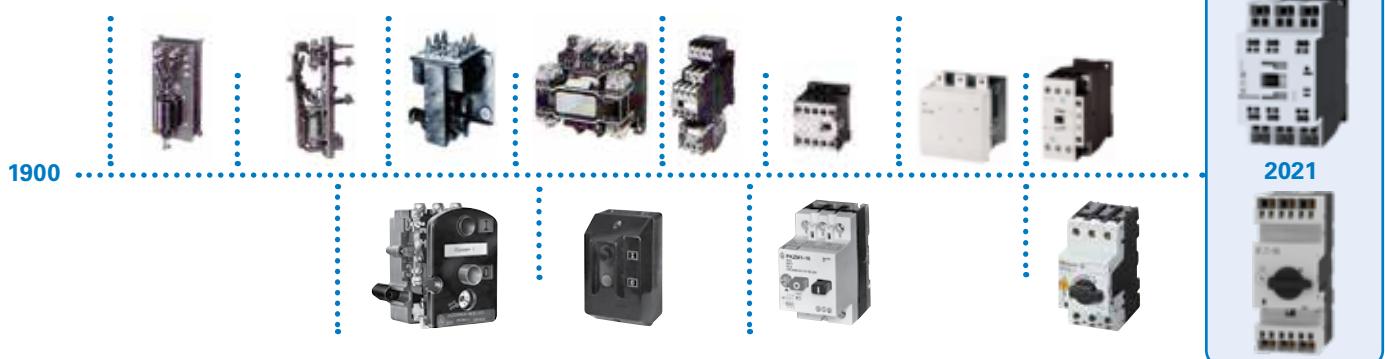

System expansion with Push-in technology

Simplify & optimize the installation and design of your machines and systems by using Eaton's tool-free Push-in technology, which can be used anywhere in the world without restrictions.

With the simplified wiring process, establishing the connection is up to 50 % faster (compared to screw terminals), thereby increasing the competitiveness of your products.

The Moeller series - a 100-year legacy

Faster commissioning

- Tool-free installation
- Simplified installation thanks to the easy Push-in technology
- Time savings of 50 % compared to screw terminals

A future-proof wiring system

- Using the next generation of cage clamp terminals
- Can be automatically installed by robots

Improved machines and systems

- High level of vibration and shock resistance, i.e. no need to retighten the cable connections after transport, immediately ready for use
- Maintenance-free over the entire service life

Easy integration

- No need to adapt the control panel design
- Screw-/Push-in combination device for use with a 3-phase busbar link

DIL contactors

The DIL contactors are powerful, efficient and versatile and can be combined with our entire product range. The DIL contactors are suitable for global use and cover the entire output range, from mini contactor relays (up to 7 A) all the way to vacuum contactors (up to 3,180 A).

Through the expansion of our product range and the use of the new Push-in technology we've made wiring even easier, faster and safer.

We've extended the rated current of the contactors with Push-in connection technology to 38 A (AC-3), and they can be controlled remotely via SmartWire-DT.

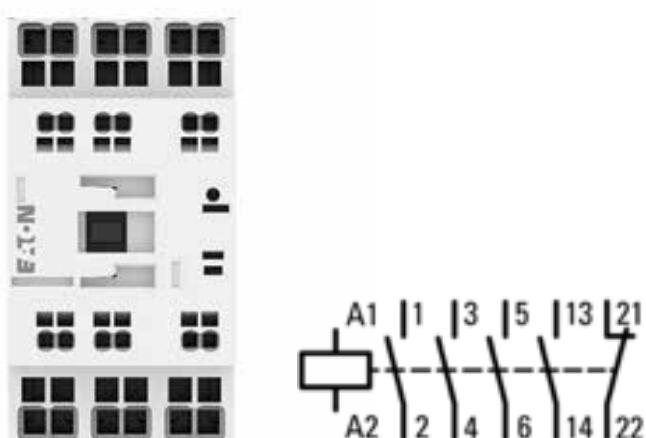

Protecting and switching IE3 motors

The latest update of the ErP Directive requires increasingly energy-efficient electric motors, with important implications for their design and protection systems. Eaton's contactors, motor-protective circuit breakers and motor-starter combinations meet the challenges associated with protecting and switching IE3 motors.

Half the number of products for easy warehousing ($1 + 1 = \frac{1}{2}$)

The base unit of the contactors with screw technology from our proven xStart range previously contained either a NC or a NO auxiliary contact. The contactors up to 18.5 kW with Push-in technology are now equipped with two auxiliary contacts (1 NC contact and 1 NO contact) as standard. The footprint, however, remains the same.

While retaining the same small footprint, we've made the contactors more versatile and equipped them for universal use. This reduces the number of different models and simplifies project planning, warehousing and spare parts management.

Existing accessories can simply be re-used!

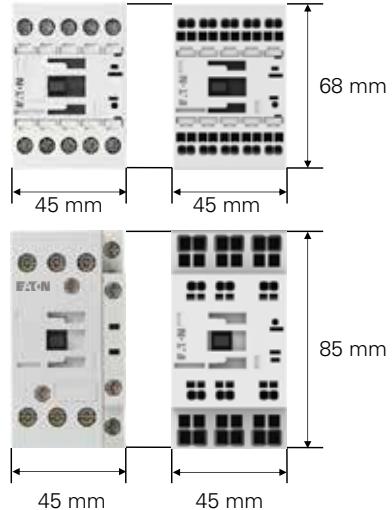

The existing accessories from the xStart range can be easily connected to the new, screw-free devices.

Whether it's auxiliary contacts, suppressor circuits, SmartWire-DT modules or plug-in wiring accessories up to 15.5 A - almost all the available accessories can continue to be used.

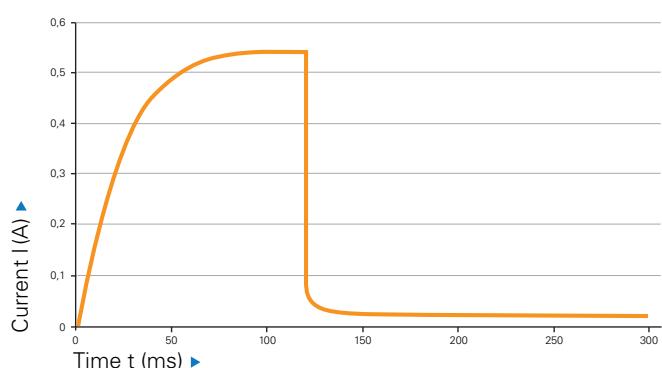

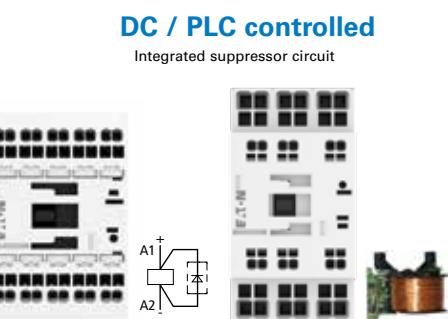

New contactor, new size? - No same dimensions

The new contactors with Push-in technology have the same footprint as the contactors with conventional screw terminals and can therefore easily be installed in existing systems. This also simplifies the planning of new systems, as the dimensions are identical.

Energy savings made easy, thanks to the integrated suppressor circuit

The suppressor circuit is already integrated in every DC operated contactor from Eaton. The contactors can thus be controlled directly from a PLC. Power contactors up to 18.5 kW also feature a coil mechanism for reducing the holding power.

PKZ & PKE motor-protective circuit breakers

Eaton's fuseless motor-protective circuit breakers combine short-circuit and overload protection in a single device. Thanks to the integrated electronic wide-range protection, the PKE is able to cover the current range from 0.3 to 32 A with only 4 types, which saves storage space and simplifies project planning. The 13 different models of the electromechanical PKZM0 cover the current range from 0.1 to 32 A.

The motor-protective circuit breakers are fully compatible with Eaton's DIL contactor series and are therefore ideally suited for use in motor-starter combinations. All accessories, including the

integrated auxiliary switches, trip indicators, voltage releases and door coupling rotary handles, can be used for the PKZM0 and the PKE as well as for the PKZM4.

In order to maintain the familiar feed-in configuration of motor-protective circuit breakers using 3-phase busbar links, our Push-in range also includes additional models with screw terminals for supplying power and Push-in terminals for connecting the loads (PKZM0...-SPI).

Designation	PKZM0-PI	PKZM0-SPI32	PKZM0-SPI16
Connection technology supply side load side	Push-in (6 mm ²) Push-in (6 mm ²)	Screw terminal Push-in (6 mm ²)	Screw terminal Push-in (2.5 mm ²)
Rated current range	0.1 ... 32 A	0.1 ... 32 A	0.1 ... 16 A
Power supply by means of 3-phase busbar link	–	Yes	Yes
Suitable for motor-starter combinations	Yes	Yes	–
Special features	100 % tool-free installation	Highly versatile	Extremely small footprint, identical in size to the PKZM0 with screw connection

Existing accessories can simply be re-used!

- Easy integration into existing systems such as the MSFS motor starter feeder system or SASY 60i
- Existing accessories can simply be re-used, no conversion necessary

Suitable for motor-starter combinations

Wiring kits for motor starters up to 32 A

- Mechanical connecting element
- Pre-assembled connecting cables

Suitable for use with

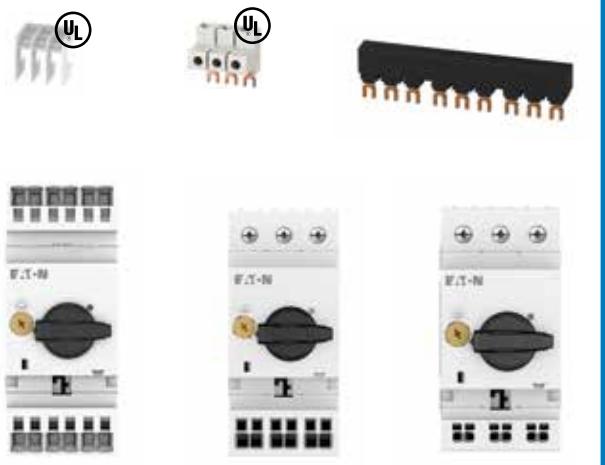

- DOL starters up to 7.5 kW / 15 kW
- Reversing starter combinations up to 15 kW

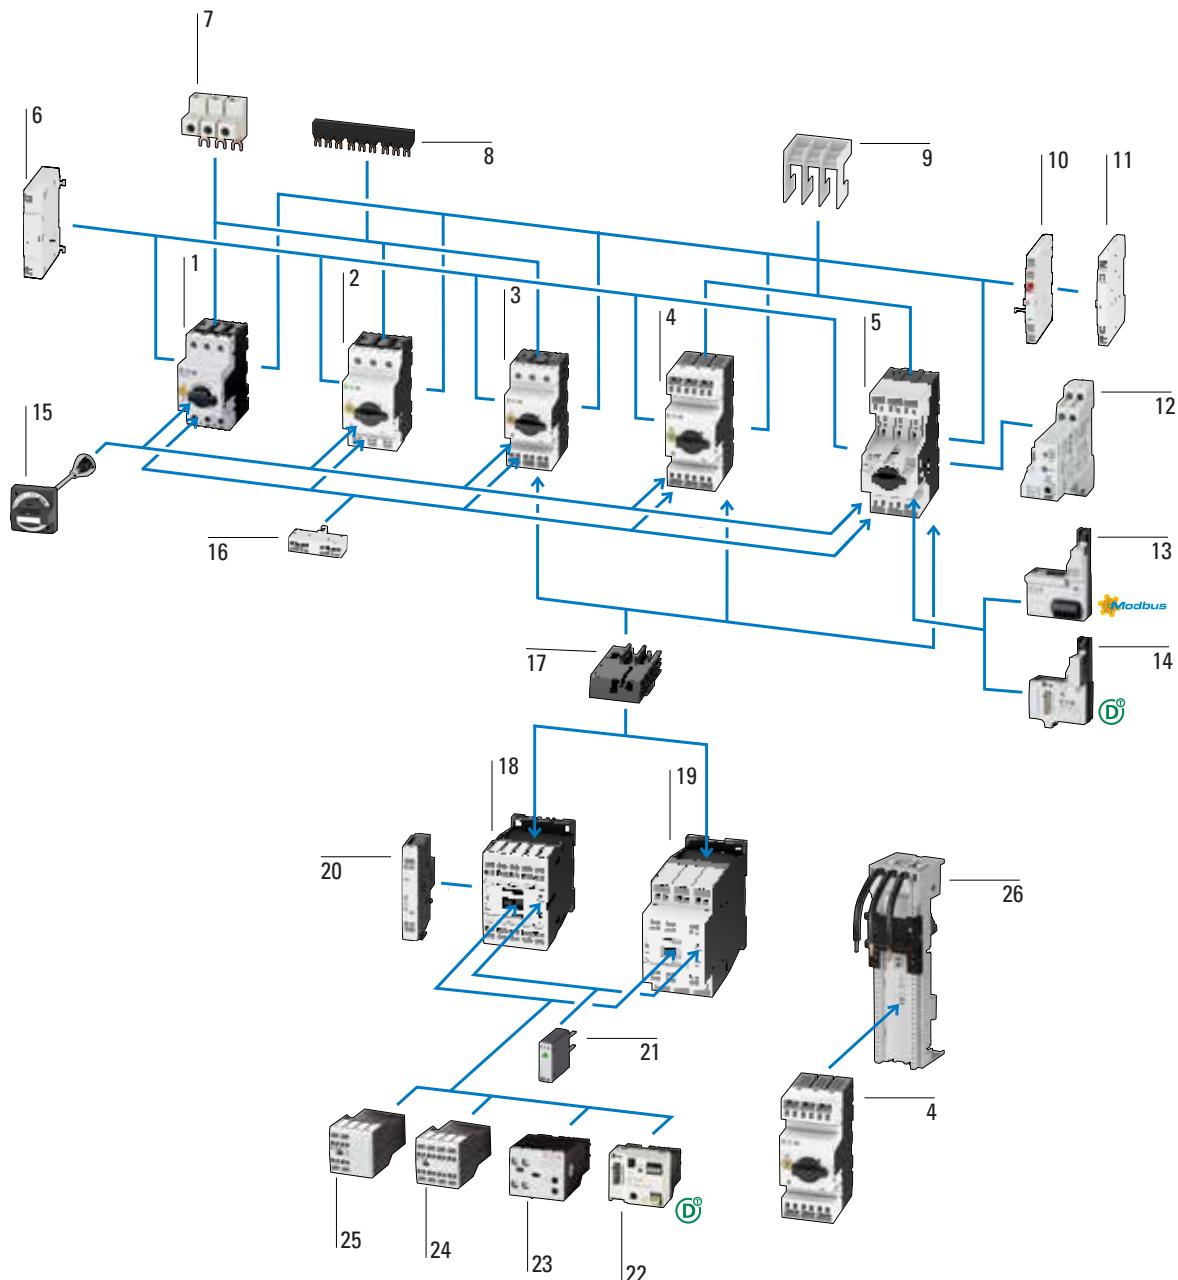

Integration into existing control panel designs for global export - Eaton makes it possible!

Our Push-in range boasts a winning combination model that integrates both screw and Push-in connection in a single device.

This means that the new devices can also be easily incorporated into existing control panel designs.

System overview

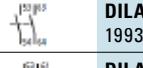

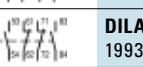

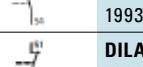

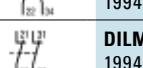

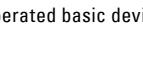

- 1 PKZM0 motor-protective circuit breaker up to 32 A – screw terminal
- 2 PKZM0 motor-protective circuit breaker up to 16 A – screw/Push-in terminal
- 3 PKZM0 motor-protective circuit breaker up to 32 A – screw/Push-in terminal
- 4 PKZM0 motor-protective circuit breaker up to 32 A – Push-in terminal
- 5 PKE motor-protective circuit breaker / circuit breaker up to 32 A – Push-in terminal
- 6 Undervoltage / shunt release – Push-in terminal
- 7 IEC/UL power supply terminal for three-phase busbar link – screw terminal
- 8 Three-phase busbar link – screw terminal
- 9 PKZM0...-PI phase isolator / UL Type E and Type F applications
- 10 Trip indicator for overload and short circuit – Push-in terminal
- 11 Side-mounting auxiliary contact – Push-in terminal
- 12 Overload relay module – screw terminal
- 13 Modbus RTU networking module for PKE
- 14 SmartWire-DT networking module for PKE
- 15 Door-coupling rotary handle
- 16 Front-mounting auxiliary contact – Push-in terminal
- 17 Mechanical connection module for motor starters
- 18 DILA contactor relay / DILM contactors up to 7.5 kW – Push-in terminal
- 19 DILM contactor up to 18.5 kW – Push-in terminal
- 20 Side-mounting auxiliary contact – Push-in terminal
- 21 Coil protection circuits
- 22 SmartWire-DT networking module
- 23 Electronic timer module – screw terminal
- 24 Front-mounting auxiliary contact, 4-pole – Push-in terminal
- 25 Front-mounting auxiliary contact, 2-pole – Push-in terminal
- 26 Adapter for motor-protective circuit breakers / motor starters

Notes:

IEC devices for world markets \triangleq UL/CSA

The setting value I_r of the current scale (depending on the load factor)

SF (service factor) = 1.15 \rightarrow I_r = 1 x I_{n mot}

SF (service factor) = 1.0 \rightarrow I_r = 0.9 x I_{n mot}

Type F starter combinations do not need an upstream protective device.

For use in Canada, the switch must be equipped with an AK-PKZ0.

¹⁾ The motor output must be calculated on the basis of the rated current. Specified values according to NEC Table 430-150.

²⁾ Suitable for star-point grounded networks

Protection of PVC-insulated cables against thermal overload in the event of a short circuit

The table indicates the minimum conductor cross-sections that are protected by the motor-protective circuit breakers up to their conditional rated short-circuit current I_q

Min. protected cross-section	Device Part no.	Protected minimum cross-section in mm ²	Complete devices Part no.

Eaton's mission is to improve the quality of life and the environment through the use of power management technologies and services. We provide sustainable solutions that help our customers effectively manage electrical, hydraulic, and mechanical power – more safely, more efficiently, and more reliably.

For more information, visit Eaton.com.
