

# VISION TRACK L

Discover Vision Track – where innovation meets installation. A tracklight where you choose your colour-temperature from 2700K to 6500K in combination with or without RGB, and using AI technology can identify and enhance the surface colors of an illuminated object. Ideal for raising the colours of an object to a whole new level. Outstanding in dynamic environments such as car showrooms, museums, supermarkets and clothing stores – everywhere intensified colours make a difference. Maximise the colours of your subject with Vision Track Pro, which adjusts the settings automatically, or manually using our app for customised lighting. The luminaire has lens technology with a high luminous efficacy and is available in black or white. All models have Bluetooth Mesh for easy control of several luminaires. Low-build universal adapter for 3-phase track, supplied complete with integrated driver.

Vision Track – choose your colour temperature, enhance your expression. Smart lighting designed to make a difference.

- AI technology that intensifies colours
- In automatic mode, the luminaire adjusts itself using AI technology
- In manual mode, you have the ability to adjust the luminaire from 2700K-6500K in combination with or without RGB
- Simple installation of luminaire and app – group and control your lighting
- Communication Bluetooth Mesh/Wifi
- 3-phase universal adapter
- Integrated driver

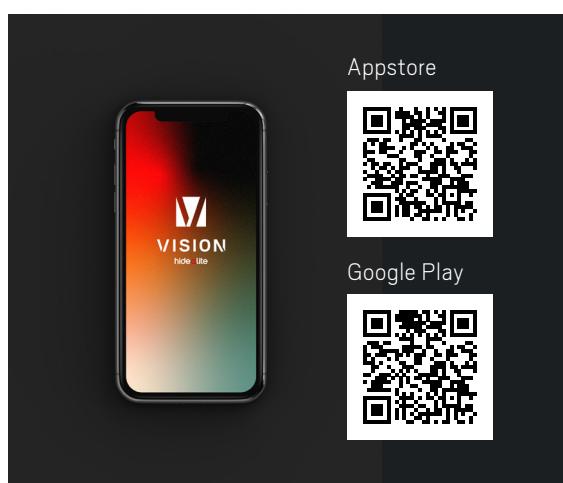

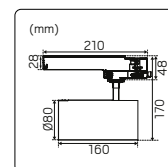

WHERE INNOVATION  
MEETS INSTALLATION
