

PROFILE WEDGE

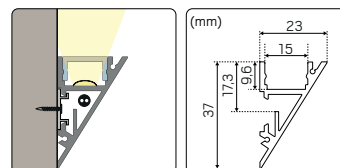

Our profile for ceiling-to-wall mounting creates a decorative grazing light along the wall surface and is available in white, black, and aluminium. An opal cover lid provides a softer, more even light without visible diodes – perfect for applications like wall lighting. A clear cover lid gives a more direct light with higher output, ideal for functional lighting in shelves or workspaces. This solution offers both aesthetics and functionality, making it an excellent choice for creating ambience.

- Now available in white, black and aluminium
