

JOLLY MAXI US

Jolly Maxi is a LED converter that gives you full control of your lighting. With a simple setting, it can tailor lighting scenarios and power most types of constant current DC LED light sources, from 350 mA to 1050 mA, and dim from 0–100%. The built-in dimming function ensures flicker-free light. The Casambi version also has a push input for momentary switches. Jolly Maxi US and Jolly Maxi US DALI allow up to 10 units to be linked and controlled from one or several locations via momentary switch, potentiometer, 1–10V or via bus/KNX systems using an actuator. A practical memory function means the unit lights up with the last setting after a power outage, even via push button.

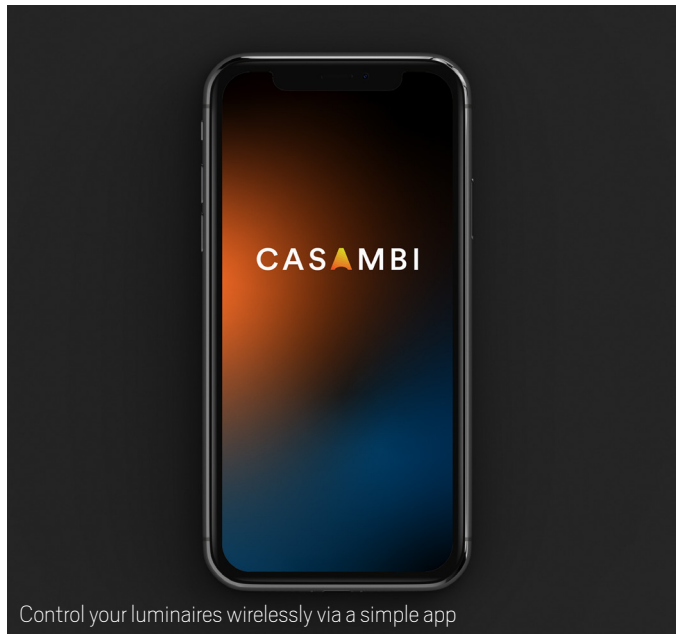

- Now with Casambi – control your luminaires wirelessly via a simple app
- Control our constant current luminaires Thin G2, Core Smart and the 12-series (350–1050 mA)
- Smart memory function in the event of power failure
