APPLICATIONS: they are used for automatic control of electrical devices with high number of operations. The switching of contacts happens when the coil is both energized and de-energized. For other applications than AC-1/AC-7a utilization category, please consult the technical pages.
CHARACTERISTICS: they can be combined with auxiliary contacts and sealing terminal covers.
NOTE: it's suggested the use of a spacer insert between adjacent contactors to ensure optimum operation.

APPLICATIONS: they have a three positions built-in toggle handle switch (A-0-I) to enable permanent opening or closing manually leaving out normal contactor function
Position A: working as normal contactor
Position O: working as manual control contactor (contacts locked mechanically)
Position I: working as manual control contactor (contacts are switched without control coil voltage). When coil is energized the toggle handle switch is automatically set to position A maintaining the previuos contacts status.
CHARACTERISTICS: they can be combined with auxiliary contacts and sealing terminal covers
NOTE: it's suggested the use of a spacer insert between adjacent contactors to ensure optimum operation.

CHARACTERISTICS: relay with single stable state; the contacts are maintained in switched position only while the control coil is supplied.
APPLICATIONS: command of low voltage circuits with high number of switchovers (lighting, heating and ventilation systems). they have a three positions built-in toggle handle switch (A - 0-1) to enable permanent opening or closing manually independently of the external commands:
Position A: automatic operation as a momentary relay.
Position O : operation as a manually commanded momentary relay (contacts locked mechanically in the rest state).
Position I: operation as a manually commanded momentary relay (contacts switched without the need for a remote control with return to automatic on A as soon as the lever is released).

APPLICATIONS: used in order to have a better heat dissipation when more contactors/relay are installed in adjacent position.
SUCGESTIONS FOR AN OPTIMAL HEAT DISSIPATION:

- Room temperature up to $40^{\circ} \mathrm{C}$ : 1 spacer every 3 side-by-side devices
- Room temperature between $40^{\circ} \mathrm{C}$ and $55^{\circ} \mathrm{C}: 1$ spacer every 2 side-by-side devices.

CHARACTERISTIC: relay with 2 stable states; every impulse to the coil switches over the contacts position that is maintained until the next signal.
APPLICATIONS: control of lighting circuits in residential and commercial installations.
t is possible to inhibit the remote command thanks to the ON/OFF frontal selector.
The lever idicates the contacts status and it could be used in order to manual command the relay.

## CENTRALIZED COMMAND

| Code | Functions | No. of modules <br> EN 50022 | Pack <br> Carton |
| :--- | :--- | :--- | :--- |
| CW D6 671 | Central command | 0.5 | $1 / 20$ |
| CW D6 672 | Group command | 0.5 | $1 / 20$ |

NOTE: It is not possible to use accessories with DC coil relays.
APPLICATIONS:

- GWD6671: used to centralize the command in only one point allowing to simultaneously turning ON and OFF 2 or more relays independently by their position. In order to use this function every relay has to mount this accessory.
- CWD6672: used to realize the simultaneously command of 2 or more groups of centralized relays from one point. In order to obtain this function it is necessary to install this accessory for each group of centralized relay.
EXAMPLE: It is possible to centralize the command of a group of relay installed on a building floor (every relay has a CWD6671 coupled). With the GWD6672 it is possible to command from one
point 2 or more groups of centralized relays installed on the different buildings floors.

## SPACER INSERT

| Code | No. of modules <br> EN 50022 | Pack <br> Carton |

| CW D6 766 | 0.5 | 12 |

APPLICATIONS: used in order to have a better heat dissipation when more contactors/relay are installed in adjiacent position.
SUCGESTIONS FOR AN OPTIMAL HEAT DISSIPATION

- Operating temperature up to $40^{\circ} \mathrm{C}$ : no limitations.
- Operating temperature between $40^{\circ} \mathrm{C}$ and $55^{\circ} \mathrm{C}$ : No limitation for AC coils, 1 spacer every 3 adjacent relays with DC coils:
- Operating temperature between $55^{\circ} \mathrm{C}$ and $70^{\circ} \mathrm{C}: 1$ spacer every 3 adjacent relays with AC coils. It is not possible the adjacent installation of relay with DC coil.

## MONITORING RELAYS

CURRENT MONITORING RELAY - 1 PHASE AC ELECTRICAL SYSTEM

| Code | Rated <br> voltage (V) | Controlled <br> current (A) | Output <br> contacts | Contact <br> capacity (A) | No. of modules <br> EN 50022 | Pack <br> Carton |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| CW 96906 | 230 ac | 10 | 1 Changeover | 5 | 1 | $1 / 8$ |

APPLICATIONS: overcurrent control: the output contact changes status when the measured current exceeds the "MAX" set value
Undercurrent control: the output contact changes status when the measured current falls below the "MIN" set value.
Window function: the output contact changes status when the measured current is not within the "MIN"-"MAX" set range.
Adjustment of contact switchover delay, from minimum 0.1 s to maximum 10 s.
For the three operating modes, there is a memory function for exceeding the set threshold.
NOTE: if you need to monitor currents greater than 10A, use a current transformer (CT),
If necessary, connect the output contact with a device (usually a contactor) suitable for the needs of the line to be commanded.

CW 96906

PHASE MONITORING RELAY - 3 PHASE ELECTRICAL SYSTEM

| Code | Rated <br> voltage (V) | Controlled <br> voltage (V) | Adjustable <br> asymmetry | Output <br> contacts | Contact <br> capacity (A) | No. of modules <br> EN 50022 | Pack <br> Carton |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| CW 96 907 | $230 / 400$ ac | $230 / 400$ ac | $5 \% \ldots 25 \%$ | 1Changeover | 5 | $1 / 8$ |  |

APPLICATIONS: phase sequence check: if the check shows that the phases are not in the correct sequence, the output contact will change its status.
Phase and neutral failure: if one of the three phases or the neutral fails, the output contact will change its status.
Asymmetry check: if the measured asymmetry value exceeds the set threshold, the output contact will change its status.
NOTE: if necessary, connect the output contact with a device (usually a contactor) suitable for the needs of the line to be commanded

CW 96907

UNDERVOLTAGE MONITORING RELAY - 1 PHASE AC/DC ELECTRICAL SYSTEM

| Code | Rated <br> voltage (V) | Controlled <br> voltage (V) | Output <br> contacts | Contact <br> capacity (A) | No. of modules <br> EN 50022 | Pack <br> Carton |

APPLICATIONS: undervoltage check: when the measured voltage falls below the set value, the output contact will change its status.
The contact switches back again when the measured voltage exceeds the set value plus the hysteresis
NOTE: if necessary, connect the output contact with a device (usually a contactor) suitable for the needs of the line to be commanded

UNDERVOLTAGE MONITORING RELAY - 3 PHASE AC ELECTRICAL SYSTEM

| Code | Rated <br> voltage (V) | Controlled <br> voltage (V) | Output <br> contacts | Contact <br> capacity (A) | No. of modules <br> EN 50022 | Pack <br> Carton |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| CW 96909 | $230 / 400$ ac | $230 / 400$ ac | 1 Changeover | 5 | 1 | $1 / 8$ |

APPLICATIONS: undervoltage check with variable threshold: when the measured voltage of one of the phases falls below the set value, the output contact will change its status.
The undervoltage threshold can be adjusted from 160 V to 240 V (Phase - Neutral)
NOTE: if necessary, connect the output contact with a device (usually a contactor) suitable for the needs of the line to be commanded

## LOAD MANAGEMENT RELAY P-COMFORT

LOAD MANAGEMENT RELAY

| Code | Rated <br> voltage (V) | Rated <br> current | Relay <br> contact | Contact <br> capacity (A) | No. of modules <br> EN 50022 | Pack <br> Carton |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| CW 96 916 | 230 ac | 32 A | 1 NC | $16 \mathrm{~A} \mathrm{AC1}$ | 2 | $1 / 6$ |

APPLICATION: the P-Comfort relay manages the power of the electrical system up to 6 kW .
In the event of overloading, P-Comfort prevents any electricity supply interruption, disconnecting only the not-preferential loads
After a predefined time lapse, $P$-Comfort automatically reactivates them, avoiding any inconvenience for the user.

## BIOCOMFORT MAIN DISCONNECTION SWITCH

MAIN DISCONNECTION SWITCH WITH SELF LEARNING FUNCTION

| Code | Rated <br> voltage (V) | Rated <br> current | Monitoring <br> voltage (V) | No. of modules <br> EN 50022 | Pack <br> Carton |
| :--- | :--- | :--- | :--- | :--- | :--- |
| CW 96 339 | 230 ac | 16 A | $5-230 \mathrm{dc}$ | 1 | $1 / 2$ |

APPLICATIONS: the BIOCOMFORT disconnection switch reduces the voltage of the electrical system when the loads connected to it in the sleeping area are switched off. It is not necessary to manually adjust the relay tripping threshold because the main disconnection switch, thanks to the self-learning function, automatically learns the value of the current absorbed by the loads and applies it as the tripping threshold. During operation of the disconnection switch, the line downstream of BIOCOMFORT is powered by a continuous monitoring voltage ( $5-230 \mathrm{~V} \mathrm{dc}$ ). This voltage prevents the formation of electromagnetic fields in the sleeping area and is necessary for restoring the mains voltage $(230 \mathrm{Vac})$ at any moment when a load is switched on.

BASE LOAD

| Code | Rated <br> voltage (V) | Pack <br> Carton |
| :--- | :--- | ---: |
| CW 96 340 | 230 ac | $1 / 5$ |

NOTE: base load necessary for fluorescent lamps, low consumption lamps, halogen lamps with transformer, dimmers, electronic transformers or loads with absorption lower than 30 mA (e.g. loads with stand-by).
