

TALEXdriver LCA 150W 24V one4all SC PRE PREMIUM series

Product description

- Dimmable 24 V constant voltage LED Driver for flexible constant voltage stripes
- One4all interface and ready2mains enable different dimming options
- Dimming range 1 to 100 %
- No additional external dimmer is needed
- Suitable for emergency escape lighting systems acc. to EN 50172
- Nominal life-time up to 50,000 h
- 5-year guarantee

Typical application

- Cove lighting, facade accent lighting, ceiling integration

Technical details

- 24 V, 150 W
- Small design (325 x 43 x 30 mm) with stretched-compact strain relief
- Small cross section
- Push terminal for simple wiring
- 2 output channels (+/-) for more flexibility in the application

System solution

- Tridonic LLE-FLEX ADV 600, 1,200, 1,800 lm/m
- Tridonic LLE-FLEX EXC 600, 1,200, 1,800, 2,500 lm/m
- In connection with Flex accessories wire to PCB plug
- The functioning of third party light sources at a low dim level cannot be guaranteed and is not recommended

Standards, page 3

System solution

IP20            RoHS

TALEXdriver LCA 150W 24V one4all SC PRE PREMIUM series

Technical data

Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
DC voltage range	176 – 280 V
Mains frequency	0 / 50 / 60 Hz
Typ. current (at 230 V, 50 Hz, full load) ^①	710 mA
Typ. current (220 V, 0 Hz, full load, 15 % dimming level)	129 mA
Leakage current (at 230 V, 50 Hz, full load) ^①	< 320 µA
Max. input power	160 W
Typ. efficiency (at 230 V / 50 Hz / full load)	94 %
λ (at 230 V, 50 Hz, full load) ^①	0.99
Typ. power input on stand-by ^②	< 0.44 W
Typ. input current in no-load operation	66.4 mA
Typ. input power in no-load operation ^②	2.5 W
In-rush current (peak / duration)	60.2 A / 195 µs
THD (at 230 V, 50 Hz, full load) ^①	< 4.3 %
Time to light (at 230 V, 50 Hz, full load) ^①	< 0.63 s
Time to light (DC mode)	< 0.32 s
Switchover time (AC/DC)	< 0.32 s
Turn off time (at 230 V, 50 Hz, full load)	< 8 ms
Output voltage tolerance	± 1 V
Output LF voltage ripple (< 120 Hz)	± 10 %
Max. output voltage (no-load voltage)	60 V
PWM frequency	~ 1 kHz
Dimming range	1 – 100 %
Mains surge capability (between L – N)	1 kV
Mains surge capability (between L/N – PE)	2 kV
Dimensions L x W x H	325 x 43 x 29.8 mm

Ordering data

Specific technical data

Type	Load	Forward voltage	Output current	Max. output power (at 24 V, full load)	Typ. power consumption (at 24 V, full load)	Typ. current consumption (at 24 V, full load)	Max. casing temperature tc	Ambient temperature ta max.
LCA 150W 24V one4all SC PRE	10 %	24 V	0.625 A	15 W	19.1 W	122 mA	80 °C	-25 ... +60 °C
	20 %	24 V	1.250 A	30 W	34.3 W	174 mA	80 °C	-25 ... +60 °C
	30 %	24 V	1.875 A	45 W	49.7 W	235 mA	80 °C	-25 ... +60 °C
	40 %	24 V	2.500 A	60 W	65.2 W	298 mA	85 °C	-25 ... +55 °C
	50 %	24 V	3.125 A	75 W	80.7 W	364 mA	85 °C	-25 ... +55 °C
	60 %	24 V	3.750 A	90 W	96.3 W	430 mA	85 °C	-25 ... +55 °C
	70 %	24 V	4.375 A	105 W	112.1 W	498 mA	90 °C	-25 ... +50 °C
	80 %	24 V	5.000 A	120 W	127.7 W	565 mA	90 °C	-25 ... +50 °C
	90 %	24 V	5.625 A	135 W	143.3 W	633 mA	90 °C	-25 ... +50 °C
	100 %	24 V	6.250 A	150 W	159.3 W	702 mA	90 °C	-25 ... +50 °C

^① Valid at 100 % dimming level.

^② Depending on the DALI traffic at the interface.

^③ Each article is single packed. In the individual package is the driver and the strain relief kits.

1. Standards

EN 55015
EN 61000-3-2
EN 61000-3-3
EN 61347-1
EN 61347-2-13
EN 62384
EN 61547
EN 62386-101 (according to DALI standard V2)
EN 62386-102
EN 62386-207
According to EN 50172 for use in central battery systems
According to EN 60598-2-22 suitable for emergency lighting installations

2. Thermal details and life-time

2.1 Expected life-time

Expected lifetime							
Type	Output load	ta	40 °C	45 °C	50 °C	55 °C	60 °C
LCA 150W 24V one4all SC PRE	100 – 150 W	tc	85 °C	88 °C	90 °C		
		Life-time	80,000 h	60,000 h	50,000 h		
	50 – 100 W	tc	70 °C	75 °C	80 °C	85 °C	
		Life-time	100,000 h	100,000 h	55,000 h	50,000 h	
	< 50 W	tc	60 °C	65 °C	70 °C	75 °C	80 °C
		Life-time	100,000 h	100,000 h	100,000 h	70,000 h	50,000 h

The LED control gear is designed for a life-time stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design.

If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

3. Installation / wiring

3.1 Circuit diagram

3.2 Mains supply wiring

The wiring can be in stranded wires with ferrules or solid from 0.5 – 1.5 mm². For perfect function of the push-wire terminals (WAGO 250) the strip length should be 8.5 – 9.5 mm.

Secondary strain relief for cables with bigger cable sheath

Secondary strain relief for cable with smaller cable sheath

3.3 Loose wiring

Release of the wiring

Press down the "push button" and remove the cable from front.

3.4 Wiring guidelines

- The cables should be run separately from the mains connections and mains cables to ensure good EMC conditions.
- The LED wiring should be kept as short as possible to ensure good EMC. The max. secondary cable length is 2 m (4 m circuit).
- Secondary switching is not permitted.
- The LED Driver has no inverse-polarity protection on the secondary side. Wrong polarity can damage LED modules with no inverse-polarity protection.
- Wrong wiring of the LED Driver can lead to malfunction or irreparable damage.

3.5 Hot plug-in

Hot plug-in is not supported due to residual output voltage of > 0 V. If a LED load is connected the device has to be restarted before the output will be activated again. This can be done via mains reset or via interface (DALI, DSI, switchDIM, ready2mains).

3.6 Earth connection

The earth connection is conducted as protection earth (PE). The LED Driver can be earthed via earth terminal. If the LED Driver will be earthed, protection earth (PE) has to be used. There is no earth connection required for the functionality of the LED Driver. Earth connection is recommended to improve following behaviour:

- Electromagnetic interferences (EMI)
- LED glowing at standby
- Transmission of mains transients to the LED output

In general it is recommended to earth the LED Driver if the LED module is mounted on earthed luminaire parts respectively heat sinks and thereby representing a high capacity against earth.

4. Electrical values

4.8 Dimming

Dimming range 1 % to 100 %

Digital control with:

- DSI signal: 8 bit Manchester Code
Speed 1 % to 100 % in 1.4 s
- DALI signal: 16 bit Manchester Code
Speed 1 % to 100 % in 0.2 s
Programmable parameter:
Minimum dimming level
Maximum dimming level
Default minimum = 1 %
Programmable range 1 % ≤ MIN ≤ 100 %
Default maximum = 100 %
Programmable range 100 % ≥ MAX ≥ 1 %

Dimming is realized by PWM dimming.

4.9 Dimming characteristics

Digital dimming value

Dimming characteristics as seen by the human eye

5. Interfaces / communication

5.1 Control input (DA/N, DA/L)

Digital DALI signal or switchDIM can be wired on the same terminals (DA/N and DA/L).

The control input is non-polar for digital control signals (DALI, DSI). The control signal is not SELV. Control cable has to be installed in accordance to the requirements of low voltage installations.

Different functions depending on each module.

5.2 switchDIM

Integrated switchDIM function allows a direct connection of a pushbutton for dimming and switching.

Brief push (< 0.6 s) switches LED control gear ON and OFF. The dimm level is saved at power-down and restored at power-up.

When the pushbutton is held, LED modules are dimmed. After repush the LED modules are dimmed in the opposite direction.

In installations with LED control gears with different dimming levels or opposite dimming directions (e.g. after a system extension), all LED control gears can be synchronized to 50 % dimming level by a 10 s push.

Use of pushbutton with indicator lamp is not permitted.

5.3 Light level in DC operation

The LED Driver is designed for operation on DC voltage and pulsed DC voltage.

Light output level in DC operation: programmable 1 – 100 % (EOfx = 0.13).

Programming by DALI or ready2mains.

In DC operation dimming mode can be activated.

The voltage-dependent input current of Driver incl. LED module is depending on the used load.

The voltage-dependent no-load current of Driver (without or defect LED module) is for:

AC: < 66 mA

DC: < 35 mA

6. Functions

6.1 ready2mains – configuration

The ready2mains interface can be used to configure the main parameters of LED Drivers via the mains wiring, such as CLO and DC level. These parameters can be adjusted either via ready2mains-capable configuration software or directly via the ready2mains programmer.

6.2 ready2mains – dimming

ready2mains allows for mains-based group dimming, controlled via the ready2mains protocol and appropriate dimming interfaces.

For details on the operation of ready2mains and its components see the relevant technical information.

6.3 Short-circuit behaviour

In case of a short-circuit at the LED output the LED output is switched off. After restart of the LED Driver the output will be activated again. The restart can either be done via mains reset or via interface (DALI, DSI, switchDIM, ready2mains).

6.4 Overload protection

If the output voltage range is exceeded the LED Driver turns off the LED output. After restart of the LED Driver the output will be activated again. The restart can either be done via mains reset or via interface (DALI, DSI, switchDIM, ready2mains).

6.5 Overtemperature protection

The LED Driver is protected against temporary thermal overheating. If the temperature limit is exceeded the LED Driver will be dimmed. The temperature protection is activated approx. +5 °C above $t_{c\ max}$ (see page 2). On DC operation this function is deactivated to fulfill emergency requirements.

6.6 corridorFUNCTION

The corridorFUNCTION can be programmed in two different ways. To program the corridorFUNCTION by means of software a DALI-USB interface is needed in combination with a DALI PS. The software can be the masterCONFIGURATOR. To activate the corridorFUNCTION without using software a voltage of 230 V has to be applied for five minutes at the switchDIM connection. The unit will then switch automatically to the corridorFUNCTION.

Note:

If the corridorFUNCTION is wrongly activated in a switchDIM system (for example a switch is used instead of pushbutton), there is the option of installing a pushbutton and deactivating the corridorFUNCTION mode by five short pushes of the button within three seconds.

switchDIM and corridorFUNCTION are very simple tools for controlling gears with conventional pushbuttons or motion sensors.

To ensure correct operation a sinusoidal mains voltage with a frequency of 50 Hz or 60 Hz is required at the control input.

Special attention must be paid to achieving clear zero crossings. Serious mains faults may impair the operation of switchDIM and corridorFUNCTION.

6.7 Constant light output (CLO)

The luminous flux of an LED decreases constantly over the life-time. The CLO function ensures that the emitted luminous flux remains stable. For that purpose the LED current will increase continuously over the LED life-time. In masterCONFIGURATOR it is possible to select a start value (in percent) and an expected life-time. The LED Driver adjusts the current afterwards automatically.

6.8 Power-up/-down fading

The power-up/-down function offers the opportunity to modify the on/-off behavior. The time for fading on or off can be adjusted in a range of 0.2 to 16 seconds. According to this value, the device dims either from 0 % up to the power-on level or from the current set dim level down to 0 %. This feature applies while operating via switchDIM, ready2mains and when switching the mains voltage on or off. By factory default no fading time is set (= 0 seconds).

6.9 Light level in DC operation

Programmable from 1 – 100 %
Programming by extended DSI or DALI signal (16 bit).
Light output level in DC operation (EOF_X): 0.13 (cannot be adjusted).
In DC operation dimming mode can be activated.

6.10 Software / programming

With appropriate software and a interface different functions can be activated and various parameters can be configured in the LED Driver. To do so, a DALI-USB or ready2mains programmer and the software (masterCONFIGURATOR) are required.

6.11 masterCONFIGURATOR

From version 2.8:
For programming functions (CLO, power-up fading, corridorFUNCTION) and device settings (fade time, ePowerOnLevel, DC level, etc.).
For further information see masterCONFIGURATOR manual.

7. Miscellaneous

7.1 Isolation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with $500 V_{DC}$ for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal.

The isolation resistance must be at least $2 M\Omega$.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with $1500 V_{AC}$ (or $1.414 \times 1500 V_{DC}$). To avoid damage to the electronic devices this test must not be conducted.

7.2 Conditions of use and storage

Environmental conditions: 5 % up to max. 85 %,
not condensed
(max. 56 days/year at 85 %)

Storage temperature: $-40^{\circ}C$ up to max. $+80^{\circ}C$

The devices have to be acclimatised to the specified temperature range (t_a) before they can be operated.

7.3 Additional information

Additional technical information at www.tridonic.com → Technical Data

Guarantee conditions at www.tridonic.com → Services

Life-time declarations are informative and represent no warranty claim.
No warranty if device was opened.
